Graduate School Admissions (GS-2020)

Participant ID:	GS2020CHMIPH02256
Registration No:	GS2020CHMIPH003305
Participant Name:	SAJID SK
Test Center Name:	Techno India MAC Center
Test Date:	08/12/2019
Test Time:	9:30 AM - 12:30 PM
Subject:	Chemistry

Section : **PART A**

Q.1 Compound **2** and compound **1** were mixed in a 1:4 molar ratio. The mixture was subjected to an ammonium molybdate test for phosphate estimation. The result of the molybdate test yielded a phosphate concentration of 36.0 mM for the mixture. What are the concentrations of compound **1** and compound **2** in the mixture?
Ans

✗ 1. Compound **1**: 30 mM
Compound **2**: 6 mM

✔ 2. Compound **1**: 24 mM
Compound **2**: 6 mM

✗ 3. Compound **1**: 28.8 mM
Compound **2**: 7.2 mM

✗ 4. Compound **1**: 24 mM
Compound **2**: 12 mM

Question Type : **MCQ**
Question ID : **4639241345**
Status : **Answered**
Chosen Option : **2**

Q.2 The coefficient of compressibility of water at 293 K is 4.9×10^{-6} atm^{-1} in the range 1 to 25 atm pressure. What will be the value of work involving the compression of 1 mol of liquid water from a pressure of 1 atm to 25 atm at 293 K in a reversible process.

Ans

✗ 1. 21.75×10^{-5} atm dm^3

✗ 2. 0.2234×10^{-5} atm dm^3

✗ 3. 225.223×10^{-5} atm dm^3

✔ 4. 2.752×10^{-5} atm dm^3

Q.6 In the case of Eigenstates of a particle in a box with infinite walls, which of the following statements is true about the wavefunction ($\psi(r)$), its first ($\psi'(r) = d\psi(r)/dr$) and second derivatives ($\psi''(r) = d^2\psi(r)/dr^2$)?

Ans

✗ 1.

All three quantities are continuous everywhere

✗ 2.

$\psi(r)$, $\psi'(r)$ are continuous but not $\psi''(r)$.

✗ 3.

$\psi(r)$ is continuous everywhere, but discontinuous at the boundaries of the box.

✔ 4.

$\psi(r)$ is continuous everywhere, $\psi'(r)$ and $\psi''(r)$ are continuous everywhere except at the boundaries.

Q.10 A scalar coupling ($^2J_{1H-1H}$) constant for a doublet in compound X is measured as 5.0 Hz on a 500 MHz NMR spectrometer. Which of the following statements is incorrect?

Ans ✗ 1.

The difference $\Delta\delta$ for the two components of the doublet depends on the field strength of the spectrometer.

✔ 2.

For this doublet, the coupling constant measured in Hz depends on the field strength of the spectrometer.

✗ 3.

For this doublet, the coupling constant is 5.0 Hz when the spectrum of X is recorded on a 250 MHz NMR spectrometer

✗ 4.

The difference $\Delta\delta$ for the two components of this doublet is 0.05ppm when measured on a 100MHz spectrometer.

	Chosen Option : **4**

Q.12 An ideal gas obeys the gas law PV= nRT. However, real gases deviate from this, and their behavior can be described in

$$PV/nRT = 1 + B_P P + \text{-----}$$

where B_P is the first virial coefficient in the expansion. Do you expect the B_P to be temperature dependent? If so, what would you expect the sign of B_P to be at low temperatures? (Near but above the critical point of condensation)

Ans

✗ 1. B_P will be temperature independent

✔ 2. Negative

✗ 3. Positive

✗ 4. Can be either positive or negative

Q.14 Beer's law for electromagnetic radiation absorption through a medium can be expressed as:

$$I = I_0 \exp(-\alpha L)$$

Where, α is the absorption coefficient, L is the path length through the medium, I_0 is the incident intensity and I is the transmitted intensity.

Consider an absorbing medium with two energy levels spaced by 600 cm^{-1}. On this medium, when monochromatic infrared radiation on resonance is made incident, which of the following statement(s) holds true?

Ans ✗ 1.

Light absorption will increase with increasing the temperature of the absorbing medium

✗ 2.

Beer's law is valid only for ultraviolet-visible part of the spectrum and is invalid in the infrared spectral region

✔ 3.

Light absorption will decrease with increasing temperature of the absorbing medium

✗ 4.

Light absorption not change with the temperature of the absorbing medium

Q.17 Iron, Cobalt and Nickel are three known elements that display ferromagnetism. Which of the following statements is true about ferromagnets:

Ans ✘ 1.

In the presence of a magnetic field, the unpaired spins of a ferromagnet all align with the external field. Then in the absence of the external magnetic field, these spins then revert back immediately to their original state.

✘ 2.

The origin of magnetism in a ferromagnet arises from randomly arranged paired spins in a lattice.

✘ 3.

A ferromagnetic material is weaker (in its attraction to an external magnetic field) than a paramagnetic material

✔ 4. None of the above.
